

**Table 2. Results from the multivariable analyses of the probability of a positive bacteriology result for positive animals at in-vivo tests from positive herds in Soria and Burgos**

|                          | Variable  | Class    | Odds Ratio | 95% Confidence interval | Estimate | Standard error | P <sup>a</sup> |
|--------------------------|---|----------|------------|-------------------------|----------|----------------|----------------|
| <b>SORIA<br/>(586)</b>   | bTB-confirmation in the herd in the previous year | No       | 1          | -                       | -        | -              | 0.007          |
|                          |   | Yes      | 0.1        | 0.01-0.5                | -2.4     | 0.9            |                |
| <b>BURGOS<br/>(1530)</b> | County level prevalence in the previous year      | 0-0.05   | 1          | -                       | -        |                | 0.001          |
|                          |   | 0.05-0.5 | 0.14       | 0.04-0.4                | -1.9     | 0.6            |                |
|                          |   | >=0.5    | 1.36       | 0.23-7.4                | 0.31     | 0.8            |                |
